

Cymbidiums and mini cymbidiums have become New Zealand's largest cut flower export. Their outstanding quality standards and grading criteria have placed them among the best in the world. Availability begins in April and goes through until November. To know you are getting an exceptional quality cymbidium, look for these criteria: the stems must be strong and straight, the flower spikes must be well balanced with no large gaps in between flowers, and all stems and blooms must be free of marking or damage. Cymbidiums are best stored at 8 to 12 degrees Celsius and it is not recommended to use them in floral foam. Please visit Sierraflowerfinder.com or click on any of the pictures below for additional pictures and information.
